

Trimble® ConstructJob Software

Trimble is pleased to offer Release 6.0 of the Trimble ConstructJob software. This document provides enhancement/modification information pertaining to this release.

Enhancements/Modifications

- **Centralized Document Header Control**
This ensures uniformity in look and feel for everything you send out from the software.
- **Project Level Document Header Override**
This feature is available for when you are not the majority stakeholder in a project.
- **Document History**
You can see who and when document changes were done in the history.
- **Document “Children”**
Entire threads of conversations are now available so you can see the complete trail of discussions with all involved in a project.
- **PDF Documents**
All documents are converted to a PDF (portable document format) when sent from the ConstructJob application. A PDF disallows changes in the documents (in a standard industry format).
- **Communications**
This version allows you to keep track of phone conversations and other more casual discussions that take place throughout the job.
- **Archive Job Documents**
At any time you can generate a collection of all of the documents of a particular type in a zip file format. The documents are converted to a PDF for storage or use elsewhere.

About the Software

The Trimble® ConstructJob software is a cloud-based project management solution tailored for the MEP contractor needs.
